Reconstruction

- We used an extensively modified **NIRFAST*** package for reconstructions. The software was adapted for the wavelength normalisation approach.
- Homemade software is employed for pre-processing, filtering and validation of RAW data.
- Tetrahedron size of mesh was set to 1mm for the **forward problem** resulting in **~9000 nodes**. The size was increased up to 2mm for bulk tissue and was kept 1mm for the tumor region in case of **inverse problem** to improve computation time. This leads to **~2000 nodes** in the same volume.
- The computation time reached **7 minutes** for the whole reconstruction process (desktop PC, i7-4770 CPU @ 3.40 GHz, 16 GB RAM).

* NIRFAST is an open source software package for MATLAB® environment created by Dartmouth college
